

DESCRIPTION

Trim Masking Tape is the special purpose automotive masking tape designed to protect rubber plastics surrounding vehicle windows from paint during painting. In other words, it is specially designed for masking rubber plastics on doors and windows in vehicles.

Removing rubber plastics surrounding the windows before painting the vehicles is a difficult and costly task. Therefore, the usage of Trim Masking Tapes during painting eliminates this difficulty and provides a perfect topcoat.

USAGE AREA

Trim Masking Tape is used during painting and repair of automobile bodies and parts. The product is specially designed to protect the rubber plastics surrounding vehicle windows from paint during the painting process.

SPECIFICATIONS

- It provides the masking of auto glass run channels/gaskets, outer belt moldings on the outer surface of the car and rubber plastics surrounding all windows of the vehicle.
- It ensures that the glass run channel is not dyed by properly masking it and prevent color difference by entering between the glass run channels.
- Easy to mask corners and edges.
- Thanks to its 38 mm interval perforations (its perforated feature), it can be easily torn to the desired length by hand.
- Thanks to the rigid PVC surface on the tape, it can be easily removed after painting. When it is removed, it leaves no sticky residue and traces on the surface.
- Speeds up the painting process.
- Provides excellent adhesion to the applied surfaces.
- The paper part of the tape is resistant to tearing.
- Suitable for the body and part shape of the vehicle.
- Can be used in all painting stages.
- Creates a soft edge during the application.
- Provides highly efficient protection by masking quickly and effectively.
- Self adhesive and resistant to solvent.
- Its temperature performance is excellent. It is resistant to 100 °C heat.
- It is resistant to water based paints.

DIMENSIONS

9 mm (Outer PVC plastic strip)							50 mm
11 mm (Inner PVC plastic strip)							
30 mm (Adhesive Paper Tape)							
38 mm	38 mm	38 mm	38 mm	38 mm	38 mm	38 mm	

As can be seen in the figure above, Trim Masking Tape consists of the combination of rigid PVC plastic and paper tape. The total width of the Trim Masking Tape is 50 mm (5 cm). 9 mm of this 50 mm width is composed of outer PVC plastic strip, 11 mm by inner PVC plastic strip and 30 mm by adhesive paper tape. In addition, Trim Masking Tape is perforated at 38 mm intervals. Thanks to this feature, the tape can be easily torn to the desired length by hand.

The total length of the Trim Masking Tape is 10 meters.
